

a) ethylene is present in an amount of from 67% to about 75% by weight;

b) the non-conjugated polyene is present in an amount of from about 0% to about 30% by weight; and

c)  $\text{CH}_2=\text{CHQ}$  is present in an amount of from about 15% to about 40% by weight;

said polymer having a viscosity average molecular weight of from about 4,000 to about 30,000 and being a solid at room temperature, with the proviso that the sum of components a), b) and c) totals 100% by weight.

--14. (Thrice amended) A composition which comprises:

a) a polymer formed from monomers comprising ethylene;  $\text{CH}_2=\text{CHQ}$  wherein Q is  $\text{C}_1\text{-C}_8$  alkyl; and optionally a non-conjugated polyene; wherein

i) ethylene is present in an amount of from 67% to about 75% by weight;

ii) the polyene is present in an amount of from about 0% to about 30% by weight; and

iii)  $\text{CH}_2=\text{CHQ}$  is present in an amount of from about 15% to about 40% by weight;

said polymer having a viscosity average molecular weight of from about 4,000 to about 30,000 and being a solid at room
